

# FA Front 3.10

FA Front 3.10 provides you with support for generating report packages, PDF report templates and JSReport-based custom reports also in FA Front.

## More standard reporting features available in Front

Version 3.10 provides you with support for utilizing standard reporting features also in FA Front. You can now configure and allow your FA Front users to generate report packages, PDF report templates and JSReport-based custom reports. This allows you to use these standard reporting features more broadly, and to benefit from the reports you've set up for FA Back with these tools also in FA Front.

**Report packages.** In addition to configuring an individual report in the Reports component, you can now *Select a report package* to be generated when your user clicks a report button in FA Front. You can manage your report packages in FA Back's Report window, and all shared report packages are directly available for you to utilize in FA Front for your end-users and advisors.

**PDF report templates.** PDF report templates allow you to complement your reports for example with your own front pages, marketing insights, or any other custom pages you would want to use. You can manage your PDF report templates in FA Back, and all PDF report templates you've uploaded are directly available for you to utilize in FA Front as part of a report package or as standalone reports.

**JSReport-based custom reports.** JSReport provides you with a JavaScript-based reporting engine to develop custom reports for client reporting. You can manage and develop your custom reports in the Reports section of FA Developer application, and all custom reports you've published are directly available for you to utilize in FA Front as standalone reports for your end-users and advisors.
